Motivation for project

The focus of the project should be to help students who need further help with their school studies. We live in a world where classes are filled with 25-30 students and not everyone gets the help needed. Even though, after school programs are offered it will be to students who require more help. We need to understand that many students require this need and everyone should be able to excel. Many parents cannot afford tutors or after school private programs. This app will help students do their work while at an affordable price.

Core features

List the core features and describe each in max one line

1. **The app should be based on school necessities. Meaning that's tutors and parents should have easy access to it.**
2. **Math workSheets (equations + - x / ; algebra ; probability ; word problem)**
3. **French and English language : grammar, comprehension text**
4. **Students are assigned to a tutor.**

Risk

1. Competitors
2. Copyright fraud
3. Student can become addicted to their mobile device
4. If parents can't afford a mobile device, students cannot use the program

Competition

Who are the competitors. In one line each, list the top 2 competitors to your project and why your proposal is better.
Please perform a google search using the title of your project and list the other search terms used.
Search terms: list the terms you used in your search

Competitor 1 :
TeachApp Private Tutoring : Our app is better because students would not need to find a tutor near them, but will be assigned to one from the beginning.

Competitor 2
